

ZIA QUANT — MASTER TRADER'S HANDBOOK

The Complete Operational, Strategic & Risk Management Manual for Zia (Quotex Binary Options)

Welcome, Zia! This manual is your complete operating guide to Zia Quant. Designed specifically for binary options trading on Quotex, this system eliminates guesswork by fusing **6 independent quantitative engines** across 10 global financial feeds. It monitors market structure, institutional liquidity, support/resistance zones, and candle dynamics to give you high-conviction **CALL (UP)** and **PUT (DOWN)** signals with exact expiry times.

1. How to Launch and Run the System (1-Click)

- **First time setup:** Double-click **setup.bat**. It creates the clean .venv environment and installs all packages in under 1 minute.
- **Everyday trading:** Double-click **start.bat**. It starts the platform and automatically opens your browser to **http://127.0.0.1:5000**.
- **Automatic data streaming:** You never have to download or refresh data. The background scheduler pulls live 1-minute candles automatically every 60 seconds.

2. Top Status Bar (The Trader's HUD)

Always glance at these 4 key indicators at the top of your dashboard:

TOP BAR ELEMENT	WHAT IT SHOWS	HOW TO USE IT IN REAL TRADING
■ UTC Clock	Current Coordinated Universal Time (e.g. 14:30:00 UTC).	Quotex runs on UTC time. Use this to trade peak volume sessions (London 07:00–16:00 UTC & New York 12:00–21:00 UTC).
■ Next Scan Countdown	Counts down from 60s to 0s in real-time.	Crucial for entry timing! When timer hits 0s, a new 1-minute candle opens. Enter trades right at the candle open for the sharpest price.
■ Live Feed Pulse	Glowing green dot with LIVE FEED tag.	Confirms your dashboard is actively receiving live data updates over real-time WebSockets.
■ Instant Scan Button	Green button at top-right of cards.	Forces an immediate scan across all 10 assets on-demand without waiting for the 60-second clock.

3. Tab 1: Live Scanner (Opportunity Heatmap)

The main screen monitors 10 assets. Here is what every part of an asset card indicates:

CARD ELEMENT	EXAMPLE VALUE	TRADER'S INSTRUCTION ON QUOTEX
Asset & Payout	EUR/USD (Payout 85%)	Shows pair and broker payout. Only trade pairs with payout ≥ 80% . (85% payout requires a 54.05% win rate to break even).
Signal Badge	■ CALL ▲ (Green) ■ PUT ▼ (Red) ■ NO_TRADE — (Grey)	GREEN: Open Quotex, select pair, click UP/CALL. RED: Open Quotex, select pair, click DOWN/PUT. GREY: No edge. Protect capital. Sit on hands.
Price Box	1.08450	Live spot price at the moment the signal was calculated.
Evidence Score	78 / 100 (Green bar)	Mathematical confidence from all 6 engines combined. Only execute trades when score is ≥ 70.
Recommended Expiry	Expiry: 3m or 5m	The exact duration to set on your Quotex timer (e.g. set timer to 3 minutes or 5 minutes).
Market Regime Tag	BULLISH (LONDON)	Tells you the active market trend direction and the active global session.
Evidence Modal	<i>Click anywhere on card</i>	Opens the Signal Inspector Modal listing the exact reasons why the trade fired (e.g. Liquidity Sweep + Pin Bar).

4. Breakdown of the Other 4 Dashboard Tabs

TAB NAME	CORE PURPOSE	HOW ZIA USES THIS TAB
■ Backtest Lab	Strategy Simulator on Historical 1-Min Data.	Select an asset (e.g. EUR/USD), period (5 Days), execution delay (3s), and click Run Simulation . Audits Win Rate, Expected Value (\$EV\$), and Max Losing Streak before trading.
■ Paper Trading	Live Forward Testing Journal (\$10 Simulated Trades).	Whenever a high-conviction signal (≥ 70) appears, the bot automatically opens a simulated trade, waits for expiry, calculates WIN/LOSS and PnL, and logs it here with \$0 real risk.
■ Performance Analytics	Aggregated Performance Slices & Profit Factor.	Shows Zia's overall forward win rate %, total net profit (\$), profit factor, and asset-by-asset performance breakdown to see which pairs are performing best.
■ System Diagnostics	Real-Time Technical Health & Latency Monitor.	Confirms database connectivity, live price stream status, calculation response time (<50ms), and total error count (0).

5. The 6 Real Market Engines Working Under the Hood

Zia Quant requires confluence from these 6 institutional engines before generating a signal:

ENGINE NAME	WHAT IT DETECTS IN THE REAL MARKET
1. Smart Money Liquidity Engine	Identifies Equal Highs/Lows where retail traders cluster stop-losses, and catches Liquidity Sweeps (fake breakouts that sharply reverse back into fair value).
2. Institutional Zones Engine	Maps high-probability Support & Resistance zones , institutional Order Blocks (OB) , and Fair Value Gaps (FVG) where institutional buy/sell orders react.
3. Market Structure Engine	Tracks pure price swings to classify Higher Highs (HH) , Higher Lows (HL) , Break of Structure (BOS) , and Change of Character (CHoCH) to ensure you trade with the trend.
4. Technical Indicator Engine	Vectorized calculation of EMA 9/21/50/200 alignment , RSI 14 momentum zones , MACD histogram expansion , Bollinger Bands , and ADX strength (>24) .
5. Quantitative Candle Anatomy	Measures real-time body-to-wick ratios and identifies 14 classic patterns including Pin Bars , Engulfing Candles , and Long Rejection Tails .
6. Economic Payout Gatekeeper	Calculates break-even math: $P = 1 / (1 + \text{Payout})$. At 85% payout, break-even is 54.05%. The bot requires at least 59.05% win probability before permitting a trade.

6. Strict Risk Management Rules (Protecting Capital)

Rule 1: Fixed 1% to 2% Stake (NEVER Martingale / Never Double Down)

If your account balance is \$100, trade a fixed **\$1.00 to \$2.00 per signal**. If you win, take the profit. If you lose, **stay at \$1.00**. Doubling down after a loss (Martingale) is a mathematical guarantee of wiping an account. Real quantitative trading wins through statistical edge (+EV), not reckless doubling.

Rule 2: Daily Stop-Loss & Target Limits

- **Daily Target:** Stop trading for the day after winning **3 to 5 trades**.
- **Daily Stop-Loss:** Stop trading immediately if you encounter **3 consecutive losses**. The bot's built-in circuit breaker will automatically pause signals on that pair to protect you.

Rule 3: Only Trade When Broker Payout is $\geq 80\%$

Quotex payouts fluctuate. If a pair drops below 80% payout (e.g. 60% or 70%), the mathematical break-even requirement spikes to 58.8%+. Skip low payout assets and stick to 80%–92% payouts.

7. Market Sessions & The Truth About Weekend OTC

- **Best Trading Hours (Monday – Friday):** Highest win rates occur during **London Session** (07:00–16:00 UTC) and **New York Session** (12:00–21:00 UTC) when genuine institutional volume is active.
- **Weekend Closures:** Standard Forex pairs (EUR/USD, GBP/USD, USD/JPY) and Commodities (Gold/Silver) close every Friday at 21:00 UTC and reopen Sunday at 21:00 UTC.
- **24/7 Weekend Crypto:** Real **Bitcoin (BTC/USD)** and **Ethereum (ETH/USD)** trade 24/7/365 with live global market liquidity.
- **WARNING on Quotex Weekend OTC Pairs:** Avoid trading simulated 'OTC' pairs on weekends. OTC feeds are generated by the broker's servers rather than the real interbank market. Stick to real Forex (Mon–Fri) and real Crypto.

8. Zia's Step-by-Step Daily Trading Routine

STEP	WHAT TO DO	EXACT EXECUTION DETAIL
Step 1	Launch Platform	Double-click start.bat. Browser opens to http://127.0.0.1:5000.
Step 2	Watch Countdown	Look at ■ Next Scan countdown at the top. Wait for the timer to tick down to 0s.
Step 3	Spot Signal	Check for cards with ■ CALL ▲ (Green) or ■ PUT ▼ (Red) and Evidence Score ≥ 70 .
Step 4	Execute on Quotex	Open Quotex tab \$ ightarrow\$ Select asset \$ ightarrow\$ Set recommended expiry timer (3m or 5m) \$ ightarrow\$ Click UP (Green) or DOWN (Red).
Step 5	Audit in Paper Log	Check the ■ Paper Trading tab after 3–5 minutes to review the automatically settled outcome.

9. How to Enable Free Telegram Mobile Alerts (Optional)

1. Open Telegram \$ ightarrow\$ Search **@BotFather** \$ ightarrow\$ send /newbot \$ ightarrow\$ Copy the **Bot Token**.
2. Search **@userinfobot** on Telegram \$ ightarrow\$ Copy your **Chat ID** number.
3. Paste them into **configs/default.yaml** under alerts:. Every strong signal will ping Zia's phone instantly!
