

ZIA QUANT — TRADER'S UI & OPERATIONAL MANUAL

A Complete Screen-by-Screen Guide for Zia to Trade with Precision on Quotex

Welcome, Zia! This guide explains every single button, clock, number, and tab on your dashboard so you know exactly how to use them to make consistent, disciplined trades.

1. Top Status Bar (The Trader's HUD)

Across the top of your screen, there are 4 critical indicators you should always glance at:

TOP BAR ELEMENT	WHAT IT SHOWS	HOW TO USE IT IN TRADING
■ UTC Clock	Current Coordinated Universal Time (e.g. 14:30:00 UTC).	Use this to know which global trading session is active (London, New York, Tokyo).
■ Next Scan Countdown	Counts down from 60s to 0s in real-time.	Crucial for entry timing! When the timer hits 0s, a new 1-minute candle opens. Enter your Quotex trade right at the start of the new candle for the best price.
■ Live Feed Pulse	Glowing green dot with LIVE FEED tag.	Confirms your dashboard is actively connected to the real-time market data stream via WebSockets.
■ Instant Scan Button	Green button at the top right of the cards.	Forces an immediate scan across all 10 assets without waiting for the 60-second timer.

2. Tab 1: Live Scanner (Opportunity Heatmap)

This is your main trading cockpit monitoring 10 assets. Here is what every part of an asset card means:

CARD ELEMENT	EXAMPLE VALUE	TRADER'S INSTRUCTION
Asset Title & Payout	EUR/USD — Payout 85%	Shows the currency pair and broker payout. 85% payout requires a 54.05% win rate to break even.
Signal Badge	CALL ▲ (Green) PUT ▼ (Red) NO_TRADE — (Grey)	GREEN: Open Quotex, click UP/CALL. RED: Open Quotex, click DOWN/PUT. GREY: Sit on hands. Protect capital.
Price Box	1.08450	The current market price at the moment the signal formed.
Evidence Score Bar	78 / 100	Mathematical confidence. Scores above 70 represent high-probability setups.
Recommended Expiry	Expiry: 3m or 5m	The exact duration to set on your Quotex timer before clicking trade.
Market Regime Tag	BULLISH (LONDON)	Tells you the active trend direction and the current trading session.
Card Click (Inspector)	Click anywhere on card	Opens the Signal Evidence Modal showing the exact institutional reasons why the signal fired.

3. Tab 2: Backtest Lab (Testing Before Trading)

The Backtest Lab lets Zia simulate and audit strategies across thousands of historical candles before risking a single dollar:

- **Asset & Window Selectors:** Choose the pair (e.g. EUR/USD) and period (Past 5 Days or 1 Month).
- **Execution Lag Modeling:** Models realistic **3-second delay** and **1-pip spread** so results mirror real execution.
- **Metrics Audit Cards:** Displays **Win Rate** (vs break-even), **Expected Value / Trade (+EV)**, **Total P&L**;, and **Max Losing Streak**.

4. Tab 3: Live Paper Trading Log (Zero-Risk Forward Testing)

The Paper Trading tab acts as Zia's automatic trading journal on live market feeds:

- **Autopilot Forward Execution:** Whenever a signal with Evidence Score ≥ 70 fires, the bot opens a simulated \$10 trade.
- **Automatic Expiry Settlement:** At the exact end of the expiry (e.g. at T + 3 minutes), the bot checks the closing price, marks **WIN** (+\$8.50) or **LOSS** (-\$10.00), and records it in the database.
- **Live Audit Table:** Shows Entry Time, Asset, Direction, Entry Price, Expiry Price, Outcome, and Net PnL.

5. Tabs 4 & 5: Performance Analytics & System Diagnostics

- **Tab 4 (Performance Analytics):** Aggregates Zia's overall forward win rate, total profit/loss, profit factor, and breakdown by asset.
- **Tab 5 (System Diagnostics):** Verifies that the SQLite database is healthy, market data feed is active, and shows uptime and latency.

6. Zia's Step-by-Step Daily Trading Routine

STEP	ACTION	DETAIL
Step 1	Launch Platform	Double-click start.bat. Browser opens to http://127.0.0.1:5000.
Step 2	Watch Countdown	Look at ■ Next Scan countdown at top. When a new minute begins, scanner refreshes.
Step 3	Spot Tradeable Setup	Look for a card with ■ CALL ▲ or ■ PUT ▼ and Evidence Score ≥ 70 .
Step 4	Execute on Quotex	Open Quotex tab \$ ightarrow\$ Select asset \$ ightarrow\$ Set recommended expiry (3m or 5m) \$ ightarrow\$ Click UP/DOWN.
Step 5	Fixed Stake (Anti-Martingale)	Trade a fixed 1% to 2% (\$1–\$2 per \$100 balance). Never double down after a loss.
